

FileFix samples can be found on FOFA as of writing with body searches for webpages or servers that do not have dynamic obfuscation or other preventive measures.

body="Open File Explorer and select the address bar (CTRL + L)" shows FileFix but for ClickFix a different query can work with body="In the verification window, press Ctrl"

The screenshot displays two search results from FOFA. The first result is for 'https://fc-checker.dlccdn.com' with a status of 443. The second result is for 'https://3.73.38.245' with a status of 443. Both results show a 'Header' tab with the following details:

- HTTP/1.1 200 OK
- Connection: close
- Content-Length: 11760
- Accept-Ranges: bytes
- Content-Type: text/html
- Date: Tue, 26 Aug 2025 16:48:57 GMT
- Etag: "688c00e-2d0"
- Last-Modified: Fri, 01 Aug 2025 16:49:18 GMT
- Server: nginx/1.24.0 (Ubuntu)

The left sidebar shows various filters and a world map. The top of the page indicates 'Nearly 1 year results. Click to view all results.'

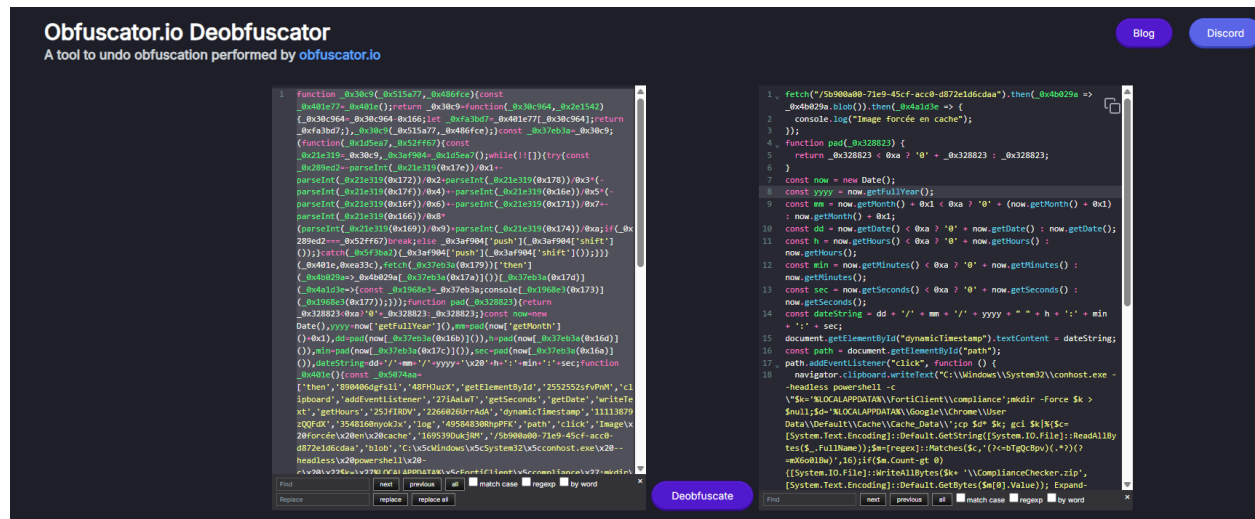

Fortinet Sample Webpage

The screenshot shows the Fortinet Secure File Access webpage. The header includes the Fortinet logo and the text 'Fortinet Secure File Access'. The main content area features a 'Fortinet VPN client compliance check' section with a timestamp of '17/09/2025 05:18:14'. The instructions are as follows:

- Copy the file path below
`\\Public\Support\VPN\ForticlientCompliance.exe`
- Open File Explorer and select the address bar (**CTRL + L**)
- Paste the file path (**CTRL + V**) and press **Enter**

A large red button labeled 'Open File Explorer' is prominently displayed. At the bottom, a copyright notice states: '© 2025 Fortinet, Inc. All Rights Reserved. This page was automatically generated for secure file access by the Fortinet support team.'

The FileFix script is obfuscated with a javascript obfuscator which can make deobfuscating take more time than needed. A javascript obfuscator deobfuscator is fully capable of deobfuscating the obfuscated script in one go.
